HiveGuard

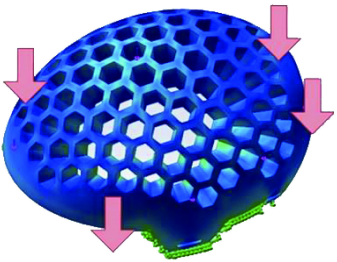

Kevin He

NHL Winnipeg Jets Prospect
Product Ambassador

4.2 million concussions go unreported in Canada and the US each year, and diagnosis relies solely on objective reports such as **SCAT 6 or self-reporting.**

- HiveGuard uses **EEG(electroencephalography)** and deep learning based assessments.
- Made with **3D-printed thermoplastic polyurethane** material with a TPMS infill that buckles on impact
- After contact, the built-in EEG cap **activates automatically** to detect brain signals and light up in case of abnormalities.

SMART protection

SAFE minds

CONFIDENT play

About HiveGuard

HiveGuard is the first smart sports-ready helmet that both reduces impact forces and delivers immediate, objective brain-health insight in real time.

Our vision is a future where no athletes have to trade their long-term brain health for the sports that they love.

Qiushi Han

Hiveguard is a story about love and the courage to protect those we care about.
